

Mercedes-Benz
Energy Storage Home.

Mercedes-Benz

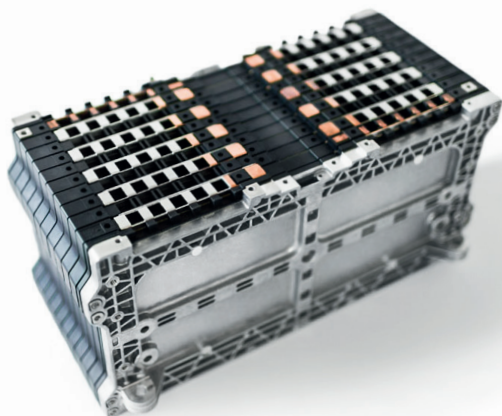

High-tech battery modules. Made in Germany.

Do you think green, already generate electricity from renewable sources and appreciate the high quality of Mercedes-Benz products? If so, you should find out about our Mercedes-Benz Energy Storage Home.

This model offers an environmentally friendly and – crucially – a safe solution for domestic energy management. Make your personal energy supply even more efficient by becoming less dependent on electricity price developments, the time of day, the supply from the public grid and the weather. Greater self-sufficiency makes increasingly good financial sense, particularly for those who own a photovoltaic system.

Whether you are a large family or a single-person household, we have the ideal solution for all your energy needs, thanks to a flexible design with modules that have a capacity of 2.5 kWh (up to eight modules for private use). Don't wait for the future: make it your own!

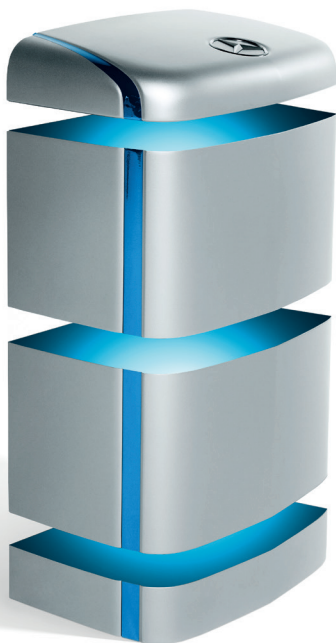

Safe

High-quality lithium-ion technology and proven Mercedes-Benz quality 'Made in Germany' means our Mercedes-Benz Energy Storage Home is durable and safe.

Sustainable

Mercedes-Benz Energy Storage Home helps to protect the environment by efficiently harnessing electricity produced by renewable energy sources.

Convenient

Manage your long-term energy costs as a self-sufficient household, increase your independence together with your own consumption, and even use it to recharge your electric vehicle in the future – all of this is possible with Mercedes-Benz Energy Storage Home. And it is so compact that several modules take up minimal space.

Innovative

We are one of the first car manufacturers to have developed energy storage cells that are already in commercial use and connected to the grid. That means you stand to reap the benefits from us immediately: our storage systems are available to order today. Always one step ahead.
